

ProSys office network expands into Europe.

A key manufacturer of isolators and containment equipment, ProSys is further expanding its network of offices by opening a base in Northern France, ideally located to serve the European markets. Earlier this year, ProSys opened an office in the US in addition to its existing bases in Ireland and the UK.

In-house expertise a key attribute.

ProSys is a preferred supplier to global pharma firms, and has recently completed a number of major containment projects as wide ranging as seed charging, drum filling, reactor charging, liquid handling, dispensing and encapsulator retrofit isolators. Our team of mechanical & automation engineers have the knowledge and experience to design a solution that will fulfil your requirements.

A partnership with each client.

Because we understand it takes more than a piece of equipment to get the job done, the Team at ProSys is committed to excellence in execution and communication with you throughout project lifecycle. This includes pre-order, early design and pre-approval stages all the way through to commissioning, installation and support.
