

CONTAINMENT & SAMPLING TECHNOLOGY

- Unloading of solids vessel to very low OEL's and high weighing accuracy
- Multiple filling heads for off-loading into either single liners via inflatable sealhead, continuous liner or RTP
- Managed airflow throughout the system to prevent cross contamination between chambers or fully segregated chambers
- Fully integrated solids dosing system to achieve very high filling accuracies
- Solids chute nitrogen purge and filtered extract options
- Integrated weigh system and roller track
- Optional pneumatic drum pusher to assist in removal of filled product drums
